

SECURITY CHECKLIST

- A network firewall or security appliance is installed
- Secure WiFi connections with complex passwords are being used
- All computers and servers have anti-virus software installed
- Network equipment is kept in a secure location and access is being documented
- Passwords are changed often and the same password is not used on multiple platforms
- Multi-factor authentication is being used when possible
- All personal devices are isolated to a separate internal network
- Devices that leave the office are encrypted (laptops and other mobile devices)
- If guest WiFi is present, it is isolated on a separate internal network
- All inbound firewall ports are closed, but if outside access is needed, a secure VPN has been established
- All devices are up to date with the latest security and software updates
- Only supported operated systems are being used (no Windows 7 or older machines)
- Credit card machines and devices processing payments are isolated on their own internal network
- User accounts no longer in use have been deleted or deactivated
- Programs used to remotely access devices are removed when no longer needed
